Par	Alex	CA	93727	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Alex Par
Paradise	Brian	FL	32082	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Parsons	Ron	CA	94080	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ron Parsons
Parthe	Randal	MT	59028	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Patton	James	CA	94024	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, James Patton
Patton	Sheryl	CA	95667	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Suzanne Pena

Penaud	Franck	ot	1218	CH	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Franck Penaud
Pengilly	Mitch	CA	94518	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lee Perry

Perry	Theresa	CA	91040	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Theresa Perry
Perry	Jin	CA	95402	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Caarolyn Pettis

Pettit	Brian	CA	93950	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Brian Pettit
Petty	Robert	CA	93436	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us - once again! - how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Julia Piatt

picard	priscilla	AZ	85014	UM	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Miriam Pineda

Plante	Douglas	CA	95018	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Fracking is a destructive and despoiling technology even under the best of circumstances. On land it generates massive air and ground water pollution which is very hard to mitigate. In the ocean there is little chance to effectively reduce the effluent. Even if a small portion of the toxic outflow could be captured there is still the likelihood that the process will stimulate seismic activity. Sincerely, Douglas Plante
Platter	Mary F	CA	92105	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ell Plunkett
Pluth	Allen	CA	91977	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Allen Pluth

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kalin Pope
Popoff	Kathy	CA	90732	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kathy Popoff

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Suzanne Pregun
Prescott	Kathy	CA	94062	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kathy Prescott

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, JOHNNY PUJOLS
Puleo	Ron	CA	95207	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ron Puleo

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Brad Rae
Raganato	Alessandro	CA	90016	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Alessandro Raganato

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. I wish I were surprised to hear of this development on the Fracking front, but I'm not. Our beautiful God created oceans were not created for energy companies to exploit. They were created as a crucial element of the environmental balance that can only be achieved when man works in concert with the natural order of nature. Fracking will destroy our oceans by infusing our oceans water with chemicals that will change the basic make up of what constitutes our pristine waters. Fracking needs to stop in our oceans and on our lands where it have already compromised ground water in a number of areas. I urge you to appoint members to the Board that are environmentally minded not profit oriented. Sincerely, Richard Ramirez

When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Louise RAngel
Ranne	Valerie	CA	95822	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Daniel Rebson
REC	Collectif	ot	75000	FR	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Collectif REC
Reckseit	Lucy	CA	94403	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Denise Rehe
Reibstein	Karen	CA	92120	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen Reibstein
Reid	John	CA	93446	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely,Jan Repp Jan Repp
Repp	Rod	CA	91706	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely,Rod Repp Rod Repp
Resor	Audra	CA	93406	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Marybeth Rice
Rice	Jay	CA	94947	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jay Rice
Rice	Tamyra	CA	95060	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, jessie riddle
riddle	michelle	CA	93021	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Marianna Riser
Riskin	Ron	CA	93103	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Janet Robinson
Robinson	Shirley	WI	54501	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Wil Rodriguez
Roessner	Michaela	CA	93581	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen Romantini
Romero	Valerie	CA	95971	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Roy Rosenblatt
Rosenblood	Jamie	CA	90049	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Scott Rubel
Rubin	Renee	CA	93428	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Patricia Rudner
rudnicki	susan	CA	90266	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am a resident of a Southern California beach town. I am acutely aware of the overt damage Homo sapiens has ALREADY done to the waters and shores of oceans worldwide, and certainly to our local marine environments. Yet, you propose to increase this egregious impact for the short term profits of fossil fuel companies? Fossil fuels are a last-century model that we should be MOVING AWAY from, not ramping up. The world wide glut of petroleum is just another reason why this fracking proposal is stupidity. Further, as the public is widely aware, the "proprietary formulations" of fracking chemical mixes, unregulated for disclosure to the very populations affected by these toxins, is a criminal cover-up of the most shameful sort. This protection afforded the fossil fuel industry, so they may endanger with impunity, is a perfect example of the ownership of our bureaucratic agencies by private industry who should be protecting US, not for-profit corporations. I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Again, a prime example of the co-opting of agencies by private industry when so-called agencies of the people should be protecting the citizens of this country and its environments. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The wildlife of this coast are suffering huge effects from the overfishing of forage fish by humans, the dirtying of the waters causing gigantic algal blooms that sicken sea mammals and their food supply, and the overall effects of Climate Change. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Our government, in abandoning its protective mandate, allows the toxic chemical mixtures pumped by the oil companies to remain "secret formulations" so that citizens can not sue them for endangering health. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. So, any intelligent person can only conclude, this strategy by our government is a "make it out of sight" so that no one can tell the damage is being done !! One can only cringe at the titles of the offices I am addressing and the irony of the meaninglessness---"bureau of SAFETY and Environmental enforcement" and "Bureau of ocean energy MANAGEMENT" Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, susan rudnicki

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, robin russell
Russell	Angela	CA	93117	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Angela Russell
Russell	Alison	CA	95062	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Helga S.
S	Alex	CA	95130	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Alex S.

Salatino	Freda	CA	95018	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I urge you to prohibit oil companies from fracking off California's coast. When I heard about BOEM's and BSEE's (slapdash?) draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Moreover, offshore fracking increases the risk of earthquakes and oil spills! (The Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed.) Obviously you're proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. Ironic, isn't it? You want to avoid increasing fracking on land (where we all can see it), by moving it into the water (where it's less evident). Fracking is still fracking, gentlemen. Offshore fracking is simply too big a gamble with our ocean's life-support systems. Please prohibit it once and for all. Respectfully, Freda Salatino
Salazar	Isaac	CA	90019	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Debra Salcido
Salerno	Mary	CA	91780	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mary Salerno
Salerno	Suzanne	CA	91780	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Paul Sanchez
Sandel	Petrea	CA	91104	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. In other words, NO WAY. Let's give breaks to solar and wind companies, not oil. NO MORE. And please, no fracking anywhere, ever. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Petrea Sandel
Sanders	Alexandra	CA	95060	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I completely agree with everything written here. I find it unfathomable that fracking continues in the United States. When will practices with completely unknown outcomes be stopped? I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Santarsiero	Vanessa	CA	94611	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing, urging you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice, that has absolutely no place in our oceans. As you know, offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds and fish, sea lions, and dolphins died. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies have shown that many fracking chemicals are toxic to both people and wildlife- like fish and sea otters for instance. Some chemicals are known carcinogens; others damage immune and nervous systems and still others remain in the dubious category of "unknown." Yet you are currently proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution, and other harms. This just shows how fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems which is why I'm urging you to prohibit it once and for all. Please consider how history will consider your decision. Sincerely, Vanessa Santarsiero
Santos	Sunshine	CA	92648	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Arbi Sarkissian
Sarkon	Sandra	CA	94109	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sandra Sarkon
Sasaoka	Julie	CA	94518	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Tina Schaare
Schachter	Sandra	CA	93924	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lauren Schiffman
Schilling	Christy	CA	91202	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Scott Schofield
scholl	linda	FL	32114	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. schwaller	greg and laurie	CA	93271	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Please prohibit fracking off California's coast. We all know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us once again the dreadful damage oil can do to our coasts and wildlife. Furthermore, fracking chemicals are toxic to people and wildlife -- known carcinogens, disrupters of immune and nervous systems, and far too many that ought to be required by law to be revealed, but are still "unknown." Allowing offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms is nonsensical. Fracking is harmful to our health, safety, economy, and environment no matter where it occurs, including in fragile and unpredictable marine environments. We strongly urge you to prohibit fracking once and for all. We need clean, renewable, sustainable, job-producing energy sources, NOT filthy, climate-disrupting, unhealthful fossil fuels. Thank you. We are counting on you. Sincerely, greg and laurie schwaller
Schwan	Melissa	AZ	85716	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would continue to dump into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Diane Schwarz
Schwarz	Axel	CA	92103	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Axel Schwarz
Schweickart	Thomas	CA	91602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Scruggs	Tena	CA	92033	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, As a California resident, I urge you to please stop oil companies from fracking in California's coastal waters. There are so many reasons to be concerned about fracking, from increasing risks of earthquakes and oil spills to the toxic "soup" of chemicals oil companies dump into OUR ocean in the process. Fracking has no place in our oceans, especially our wildlife-rich coastal waters. Because it is harmful effects on land is no reason to allow it in the ocean. Let's put our support behind clean, sustainable energy--not sources which poison our earth. I urge you to draw a line in the sand/ocean and prohibit ocean fracking. Sincerely, Tena Scruggs
seales	pauline	CA	95060	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, pauline seales

SEaly	Berenice	CA	91737	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Berenice SEaly
Searcy	Teri	CA	94061	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kim Sellon

Sellon	Kim	NJ	7974	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kim Sellon

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Gopal Shanker

Shanske	Donna	CA	92103	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Donna Shanske

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carol Shelton

Shemberg	Bea	CA	90293	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Bea Shemberg
Shen	Elizabeth	CA	94043	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Valerie Shore

Shreve	Rick	CA	95571	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Siegmann	Eric	CA	92683	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Our biologically diverse ecosystem is already under tremendous pressure form human activity, and when more than 140,000 gallons of crude oil were dumped into the Pacific Ocean hundreds of birds, fish, sea lions and dolphins were killed. There is no magic wand you can wave to undo this kind of damage. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife such as fish and sea otters. I can tell you from my experience working in the petroleum industry that what's good for extracting toxic gas and oil from deep underground is bad for all living things, including people. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Fracking is a messy business. Still, your proposal is to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution, endanger our aquafers, and cause other harm. If we look at this from a public health standpoint, it becomes difficult to justify fracking as a safe endeavor and only demonstrates that fracking is risky no matter where it occurs, including fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Eric Siegmann
Sigala	Patrick A.	CA	91910	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Annette Sillje
Sills	Alma	CA	93277	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Alma Sills

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Eric Simpson
sims	bruce	CA	92027	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, bruce sims

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dale Sloat
Slyke	Rosemary Van	CA	91311	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rosemary Van Slyke

Smalley	Mary	CA	90045	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mary Smalley
Smarr	Janet	CA	92037	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I strongly urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was horrified and disappointed. The California shore is our pride and joy, and attracts visitors from around the world. We also enjoy fresh wild fish to eat. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. The Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, killing large numbers of birds, fish, dolphins and sea lions. Moreover, offshore fracking increases the risk of earthquakes, to which California is already prone; we don't need that risk aggravated. Even without oil spills, the fracking chemicals oil companies would resume dumping into our ocean pose a serious danger. Studies show that many fracking chemicals are toxic to people and wildlife such as fish and sea otters. Some chemicals are known carcinogens; others damage the immune and nervous systems. People swim and surf on the California shore, and eat fish from these waters. We can not tolerate toxic chemicals being regularly dispersed into our ocean. Incongruously, you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky and health- and environment- threatening no matter where it occurs, including in fragile and unpredictable marine environments, where cleanup is even harder than on land.. Offshore fracking is simply too big a threat to our ocean's life-support systems and to the California tourist business and to the health of swimmers, surfers, and fisheries. I urge you to prohibit it once and for all, in the ocean as well as on land. At the very least, you must complete the legally required environmental review and do it honestly, with full recognition of the real risks, and without undue pressure from the fracking industry. Sincerely, Janet Smarr

Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, maurice smith
Smith	Diane	CA	91326	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Yin So
Soares	Genevieve	CA	94610	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mike Souza
Souza	Julie	CA	92116	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mandy Spitzer
Spivey	Julia	CA	95061	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Sr	Charles Brexel	GA	30075	US	<p>Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I, along with all of the supporters of this letter, am writing to urge you to prohibit oil companies from fracking off of California's coast. The supporters of this letter include more than 200,000 US big and small companies, more than 214 Fortune 500 companies, more than 435 worldwide, institutional investors, more than 2,035 individual large investors, more than 7 states, more than 107 cities, more than 140 million citizens and more than 70 organizations. When we heard the news about your agency's cursory draft analysis of offshore fracking, we were incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know, offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals that oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet, you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That is why we strongly urge you to prohibit it, once and for all. Offshore fracking does not pass the 'climate test' that President Obama pledged for the Keystone XL and the Arctic, and new offshore drilling anywhere threatens the climate. In order to curb runaway climate change and join in the global effort to restrict climate change to less than 1.5 degrees, we MUST keep fossil fuels in the ground. To that end, we are asking you to prohibit offshore fracking, once and for all. In addition to the negative climate effects, coastal communities and wildlife are threatened by these drilling plans. Livelihoods rooted in tourism, fishing, and other coastal activities could be harmed from oil leaks and toxic fracking chemicals. Please protect our climate and our coasts by leaving fossil fuels in the ground and stopping new offshore fracking prospects off of California's coast. Instead of offshore, oil and gas fracking or drilling, please hurry up and keep trying every one of your ideas to, massively and urgently, increase and schedule the actual installation of huge, new additional amounts of offshore wind turbines where they are environmentally safe. Thank you. Sincerely, The following are all supporters of this letter: - More than 200,000 US big and small companies including GE, AT&T, Verizon and HP - More than 214 Fortune 500 companies including Walmart, Berkshire Hathaway Energy and Apple - 14 big food and beverage companies including Nestle USA, PepsiCo, Unilever, Coca-Cola and Mars - More than 435 worldwide, institutional investors and 2,035 individual large investors - The six top Wall Street and US banks including JPMorgan Chase, Bank of America and Citigroup - The states of California, New York, Washington, Oregon, Minnesota, Vermont, New Hampshire and Hawaii - NY City, Los Angeles, Chicago, Houston, Philadelphia, Phoenix, more than 101 other US cities and other municipalities - More than a probable 225 million Americans who want more solar and wind power installed, rather than more fossil fuel and nuclear power, because solar and wind power provide less pollution and better health - Over 140 million people living in areas with unsafe ozone levels - More than 33 million people affected by chronic lung disease - Over 19 million adults living with asthma - More than 7 million children affected by asthma - More than 43.15 million supporters of the Center for Biological Diversity and more than 69 other organizations - More than 1.4 billion religious followers - More than 6.5 million worldwide companies, with over \$7.3 trillion in total annual revenues Charles Brexel Sr.</p>

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Doris Stackhouse
STAGE	RONALD	CA	91201	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Stebbings	Barrie	CA	94924	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, For human health and environmental safety reasons it is vital to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. It is becoming established that offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why it is urgent that you prohibit it once and for all. Sincerely, Barrie Stebbings
Steckling	Alithia	CA	92069	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, karen steele
Steele	Mary	CA	92677	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kathleen Stephens
Stephenson	Deborah	MD	21793	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sierra Stilwell
Stinstrom	Amy	CA	92602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Linda Strauss
Strayer	Rosa	CA	90601	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ann Sullivan
Sullivan	Sandra	CA	94563	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michael Sweeney
Sweeney	Carolyn	CA	94804	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carolee Tamori
Tanaka	LJ	CA	92075	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. !!!EXTINCTION is 4EVER!!! 1 egregious spill & We R DONE. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Taylor	Ed	CA	92646	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ed Taylor
Taylor	Gregory	CA	94546	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Susan Terence
Terry	Susan	CA	94951	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Susan Terry Susan Terry

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Seth Thomas
Thomas	Carole	CA	95814	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carole Thomas
Thomas	Tracey	CA	90035	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Patricia Thorpe
Thrailkill	James	CO	80501	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Tillman	Terry	CA	90403	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I'M A 73 YEAR OLD STANFORD GRADUATE, AND RECOVERED BUSINESSMAN. I GREW UP IN OREGON AND FONDLY REMEMBER AS A BOY SCOUT CAMPING IN PRISTINE, VIRGIN OLD GROWTH FORESTS AMONG 6 - 9 FOOT DIAMETER, 600 - 1,000 YEAR OLD DOUGLAS FIR, SLEEPING ON MOSS SIX INCHES DEEP AMIDST FERNS SIX FEET TALL, NEXT TO CRYSTAL CLEAR STREAMS. AND NOW THEY, AND THE BEAUTIFUL ENVIRONMENT AROUND THEM, ARE GONE--CUT DOWN IN THE VERY SHORT TERM INTEREST OF JOBS. AND NOW THE JOBS ARE GONE TOO! MY CHILDREN AND GRANDCHILDREN AND HUNDREDS OF GENERATIONS BEYOND WILL NEVER EXPERIENCE THIS. A 40 YEAR OLD "RENEWABLE RESOURCE" FOREST IS NOTHING AT ALL LIKE AN OLD GROWTH FOREST. FROM MY PERSPECTIVE THE SHORT TERM THINKING THAT CAUSED THIS IS PRETTY STUPID, AS WELL AS FEAR BASED, SELFISH AND GREEDY. PLEASE DON'T CONTINUE MAKING THE SAME MISTAKE WITH OIL! I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Gerard van Tol
Tol	Maud van	ot	2986EV	NL	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Vincent Tran
Tran	Kim	CA	92707	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michael Tucker
Tunioli	Georgia	CA	90027	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. v	s	CA	94552	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, s v

Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Christopher Vargas
Vargas	Erika	CA	94546	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Erika Vargas
Vargas	Erika	CA	94546	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ingrid Verbraeck
verga	enrico	CA	90740	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, enrico verga

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen Viterna
VITO	SANDRA	ot	46022	ES	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, SANDRA VITO
Vivado	Donna	MA	2632	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Julie Waddell
Wade	Lisa	CA	95032	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lisa Wade
Wager	Joan	CA	94707	AD	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sandra Walker
Walker	Deborah	CA	94518	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Deborah Walker
Wallace	Robert	CA	90602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Walter	Doug	CA	95616	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. I believe your agency's draft analysis of offshore oil extraction practices could be greatly improved, to the benefit of both our economy and our ocean. Many areas of the California coast already have a great deal of seepage from naturally-occurring fissures. High pressure fracturing of strata below the surface is not going to make this situation better. Offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a danger, and no mitigation is proposed. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Doug Walter

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Christopher Ware
Warner	Chris	CA	94933	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Chris Warner
Warner	Susan	CA	95631	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Warner	Peter	CA	95472	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to demand that you prohibit oil companies from fracking off California's coast. The Bureau's cursory draft analysis of offshore fracking is inadequate, misinformed, and hazardous to the marine and terrestrial environment. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean or on land, and is antithetical to environmental protection, let alone public health. Just who do the Bureau of Ocean Energy Management and Bureau of Safety and Environmental Enforcement work for? From your industry-friendly analysis, you clearly don't work for the public that pay your salaries nor on behalf of environmental protection! Offshore fracking increases the risk of earthquakes and oil spills -- the Refugio spill last year demonstrated the damage the petroleum industry routinely perpetrates on the marine and coastal environment. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Meanwhile, industry gets a pass from so-called regulatory and environmental and public safety who appear content to maintain the corporate status quo at the expense of environmental health and public safety. Your performance on behalf of corporate pillage should get you prison sentences, if not direct action against your stinking, criminal betrayals. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems -- and this is just part of what's known about the hazards people and the environment are expected to tolerate in the name of corporate crime. Your agencies are collaborators and perpetrators of those crimes, and you will be held accountable, if not by law, then through direct action. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. Stop fracking everywhere -- NOW! Otherwise, you are guilty of the crime and will do the time! Talk about environmental terrorism -- this is IT! Sincerely, Peter Warner
warner	michelle	CA	94709	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Fran Watson
Watson	Donna	CA	95833	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Judith +M Weber
Webster	William	CA	95966	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, William Webster
Weems	Susan	ME	4011	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Brian Weissbuch
Weisser	Melinda	AZ	85552	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Melinda Weisser-Lee
Weissglass	Roberta	CA	93130	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen West
Westbrook	Janet	CA	93555	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I want to urge you to prohibit all oil companies from fracking off California's coast. Your agency produced a cursory draft analysis of offshore fracking, I am incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Plus that's a lot of fresh water dumped into the ocean too. It may be a large ocean, but the chemicals are still there, getting into the food chain - so it does matter! Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Just stop fracking, period Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Janet Westbrook
Wetteland	Signe	CA	95618	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. White	Sally	CA	91355	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sally White
White	Edwina	CA	95811	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was stunned. Fracking is a dirty, dangerous practice that has no place in our ocean. As you know, offshore fracking increases the risk of earthquakes and gas & oil releases. The Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would dump into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife, like fish and sea otters. Some chemicals are known carcinogens, others damage immune and nervous systems. Still others remain in the dubious category of "unknown." The rationale for allowing offshore fracking is that it could prevent more fracking on land -- which would increase air pollution and other harms. This is faulty logic: it shows that fracking is risky no matter where it occurs, perhaps especially in fragile and unpredictable marine environments. Offshore fracking is too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Edwina White
White	Joseph	CA	95614	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ramey White
Whitefeather	Angelica	CA	90006	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Angelica Whitefeather
Whitehurst	Ron	CA	93001	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sarah Wildwood
Wilent	Hollie	CA	95046	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Hollie Wilent
Wiley	Kimberly	NY	14612	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Williams	R.Terra	CA	95472	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, My family of six concerned adults and I are strongly urging you to prohibit oil companies from fracking off California's coast. When our family learned of your agency's cursory draft analysis of offshore fracking, we were incredibly disappointed and in fact, we were outraged! Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why our family is joining together with other concerned Californians to urge you to prohibit it once and for all. Sincerely, R.Terra Williams
Williams	Joanne	CA	94941	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Please prohibit fracking off our coast. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sara Williams
Williams	Glen	CA	96094	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rosemary Wilvert
Winburn	William	CA	90275	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Raven Wing
Wingerd	Mala	CA	92119	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, We, the U.S., should be promoting cleaner, renewable forms of energy! We should be global leaders. We have the technology, but lack the insight and support to make it happen in a timely manner. We should no longer be using dirty and dangerous fossil fuels and/or nukes. No form of energy use is perfect, but there are certain forms that are much less damaging. If the govt had supported these forms as they have funded fossil fuels and nukes for the past one or two decades, we would be in a much better position on Earth today! No one cried for wagon makers when the car replaced wagons. The economy will right itself - we need to give it that chance! SO - I am writing to urge you to prohibit oil companies from fracking off California's coast. Not just CA, but every U.S. coast, and any land mass as well!!!! When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Witt	Rose Ann	CA	91362	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing as a biologist and mother who is deeply concerned about the current administration's shortsighted poisoning of California's coastal environment, and the devastating implications of same to my family's and neighbors' health, to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was outraged. Fracking is a toxic, polluting and hazardous practice that has absolutely no place in our oceans or in a planet with a warming, and destabilizing, climate. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this rationale just illustrates that fracking is too risky to continue no matter where it occurs, including in our fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rose Ann Witt
Wittl	Wendy	CA	93105	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Johanna van de Woestijne
Woggon	Gerhard	CA	95482	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Gerhard Woggon
Wohlander	Jessica	CA	94606	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ross Woodbury
Woodford	Jill	CA	94024	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jill Woodford
Woodhouse	Marily	CA	96059	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, pam wright
Wright	Dale	CA	92065	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dale Wright

The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dani Yarnell
Yaroslow	Rev Gregory	CA	92373	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rev Gregory Yaroslow

The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, j yudell
Yurman	Rich	CA	94618	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rich Yurman
Zacharie	Anne	QC	H9J 3P2	CA	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sandy Zelasko
Zell	Johanne	CA	93012	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lisa Zure
Zure	Lisa	CA	94960	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. We have already gone TOO FAR in destroying our incredibly beautiful and NOW FRAGILE OCEAN AND MARINE LIFE. We desperately need an ENVIRONMENTAL HERO who ACTS to PRESERVE OUR COASTAL WATERS. The California coastline is the jewel of the nation... yet we are watching massive die-offs of marine life, unsafe waters for humans, etc. We need to PROTECT our WATER.... not continue to contaminate it. We don't have any time to waste, we must let our ocean life repair. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was extremely dismayed. Fracking is a life-threatening, radioactive, unmanageable (this recent spills, etc), dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. If the people cannot depend on our officials to protect us and our environment from the destructive greed of oil companies and others who profit from "fracking" and offshore drilling.... then we literally have no one to protect our interests. We want to live... and we want our ocean and ocean life to live. Sincerely, Lisa Zure
Zyla	Alison	CT	6413	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Alison Zyla

Zylius	Patricia	CA	95062	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Patricia Zylius
